GLADIOLI IN MIXTURE

“IDEAL MIXTURE”

Each year the demand for Gladioli in good mixtures becomes greater, and in the past few years the demand has been far greater than the supply.

To meet this demand I have made up an ideal mixture of some of the best named and unnamed varieties.

The unnamed varieties are of my own recent production, many of which resemble named varieties so closely that it does not warrant naming them. This mixture contains a wide range of colors, shapes and sizes of both the plain and ruffled petal varieties.

CULTURAL DIRECTIONS

Plantings for cut flowers should be made in rows eighteen inches apart, - with bulbs three inches apart in the row, covering from four to six inches, according to the size of the bulbs; press the earth firmly around each bulb. Care should be taken to plant the bulbs right side up, and deep enough so that the new bulb, which forms on top, will not be pushed too near the surface. For succession of bloom, plant from the time the ground can be worked until June 15. — After the spike begins to show, all weeds should be removed, and if the soil is kept thoroughly worked, watering will hardly be necessary; they are great drinkers, however, and respond quickly to water. Always water after sundown.

T E R M S — Remittances must accompany all orders. Send Post Office or Express Money Orders, Draft or Certified Checks.

All bulbs sent prepaid at prices quoted.

Place your orders early.
